An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation. The network forms by connecting the output of certain neurons to the input of other neurons forming a directed, weighted graph.

Artificial neural network - Wikipedia

Artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. In computer science AI research is defined as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals.

IEEE Transactions on Neural Networks and Learning Systems publishes technical articles that deal with the theory, design, and applications of neural networks and related learning systems.

IEEE Transactions on Neural Networks and Learning Systems

(Third edition) by Stuart Russell and Peter Norvig. The leading textbook in Artificial Intelligence. Used in over 1300 universities in over 110 countries. The 22nd most cited. computer science publication on Citeseer (and 4th most cited publication of this century).

Artificial Intelligence: A Modern Approach

Hacker's guide to Neural Networks. Hi there, I'm a CS PhD student at Stanford. I've worked on Deep Learning for a few years as part of my research and among several of my related pet projects is ConvNetJS - a Javascript library for training Neural Networks. Javascript allows one to nicely visualize what's going on and to play around with the various hyperparameter settings, but I still ...

With new neural network architectures popping up every now and then, it's hard to keep track of them all. Knowing all the abbreviations being thrown around (DCIGN, BiLSTM, DCGAN, anyone?) can be a bit overwhelming at first. So I decided to compose a cheat sheet containing many of those architectures. Most of these are neural networks, some are completely [!]

Artificial Neural Network (ANN) - Kumamoto U

Time series prediction problems are a difficult type of predictive modeling problem. Unlike regression predictive modeling, time series also adds the complexity of a sequence dependence among the input variables. A powerful type of neural network designed to handle sequence dependence is called ...

An Introductory Study on Time Series Modeling and Forecasting

The mysterious mind of this vehicle points to a looming issue with artificial intelligence. The car's underlying AI technology, known as deep learning, has proved very powerful at solving problems in recent years, and it has been widely deployed for tasks like image captioning, voice recognition, and language translation.

Neural-Symbolic Integration Workshop series on Neural-Symbolic Learning and Reasoning. At Dagstuhl seminar 14381, Wadern, Germany, marking the tenth edition of the workshop on Neural-Symbolic Learning and Reasoning in September 2014, it was decided that Neural-Symbolic Learning and Reasoning should become an Association with a constitution, and a more formal membership and governance structure.

Neural-Symbolic Integration

Recurrent neural networks, or RNNs, are a type of artificial neural network that add additional weights to the network to create cycles in the network graph in an effort to maintain an internal state.
