Stem cells are biological cells that can differentiate into other types of cells and can divide to produce more of the same type of stem cells. They are found in multicellular organisms.. In mammals, there are two broad types of stem cells: embryonic stem cells, which are isolated from the inner cell mass of blastocysts, and adult stem cells, which are found in various tissues.

A tooth (plural teeth) is a hard, calcified structure found in the jaws (or mouths) of many vertebrates and used to break down food. Some animals, particularly carnivores, also use teeth for hunting or for defensive purposes. The roots of teeth are covered by gums. Teeth are not made of bone, but rather of multiple tissues of varying density and hardness.

### **Tooth - Wikipedia**

The key to this phenomenon, which scientists call "evolutionary paradox", could be in how Homo's diet has evolved. Digestion starts first in the mouth and, so, teeth are essential in breaking food down into smaller pieces.

### **'Homo' is the only primate whose tooth size decreases as**

Many of the suggestions below involve the use of animals. Various laws apply to the use of animals in schools particularly any "live non-human vertebrate, that is fish, amphibians, reptiles, birds and mammals, encompassing domestic animals, purpose-bred animals, livestock, wildlife, and also cephalopods such as octopus and squid".

La malattia di Charcot-Marie-Tooth o CMT o Hereditary Motor and Sensory Neuropathy (HMSN), nota anche come Neuropatia motorio-sensitiva ereditaria, Ã una sindrome neurologica ereditaria a carico del sistema nervoso periferico (neuropatia periferica). Deve il suo nome ai tre medici che per primi la descrissero: Jean-Martin Charcot, Pierre Marie, e Howard Henry Tooth.
