February 2012 - Circuits Systems and Signal Processing This brief presents the use of fractional order logistic equation to generate radar sequences. A generalized expression for logistic equation is presented. Later, the generation of binary phase code sequences using fractional order logistic map is discussed. It has been observed that sequences with good merit factor can be generated by varying fractional order, \pm .

The following text is designed to provide an efficient introduction to electronic circuit design. The text is divided into two parts. Part I is a barebones introduction to basic electronic theory while Part II is designed to be a practical manual for designing and building working electronic circuits.

Si Silicon is the most common material used to build semiconductor devices. Si is the main ingredient

of sand and it is estimated that a cubic mile of seawater contains 15,000 tons of Si. Si is spun and grown into a crystalline structure and cut into wafers to make electronic devices.

ELECTRONIC DEVICES AND CIRCUITS LABORATORY MANUAL (ECE-218)

This book is intended as a text for a first course in electronics for electrical engineering or physics students, has two primary objectives: to present a clear, consistent picture of the internal physical behavior of many electronic devices, and to teach the reader how to analyze and design electronic circuits using these devices.

Notes on Analog Circuits Digital circuits deal, in principle, with only two values of voltage, whereas analog circuits process signals with continuous variation of voltage. In fact, of course, no macroscopic signal is truly quantized, so even a digital circuit designer needs some familiarity with analog electronics. These notes will provide a very basic introduction to the capabilities of ...
