

general information about cathodic pdf

Cathodic protection (CP) is a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. A simple method of protection connects the metal to be protected to a more easily corroded "sacrificial metal" to act as the anode. The sacrificial metal then corrodes instead of the protected metal.

NAVSEA Basic Paint Inspector Training: Introduction

Sustainability seems to be the latest catch-phrase, and cathodic protection (CP) is an important component for the sustainability of many metal structures. What better way to preserve and maintain infrastructure than to mitigate corrosion? Some CP systems are comprised of sacrificial anodes that naturally corrode to protect less active metals such as steel.
