Introduction To Stereochemistry Compounds that are not superimposable with their mirror image are called chiral (in Greek, chiral means "handed") 3-methylhexane is a chiral molecule.

Organic Chemistry Review of Stereochemistry CHIRALITY: A chiral carbon atom is defined by all of the following criteria: A. Only sp³ carbon atoms can be chiral (not sp² or sp. Other atoms like N and S can be chiral).

Organic Chemistry table of contents > Stereochemistry . Stereoisomerism []. Stereoisomers are compounds that have the same connectivity (constitution) and the same chemical formula, but are isomers because they differ in the spatial arrangement of the atoms attached to the stereocenters (chirality centers) throughout the molecule. All stereoisomers are unique and possess their own physical ...
