Qualitative content analysis in nursing research: concepts, procedures and measures to achieve trustworthiness

Qualitative content analysis in nursing research: concepts

Criticisms of the lack of objectivity and generalizability are often associated with the qualitative method (Phillimore and Goodson, 2004). Extracting and analysing qualitative data is not a straightforward process due to the nature of the method.

Sampling is central to the practice of qualitative methods, but compared with data collection and analysis its processes have been discussed relatively little. A four-point approach to sampling in qualitative interview-based research is presented and critically discussed in this article, which integrates theory and process for the following: (1) defining a sample universe, by way of specifying ...

Introduction. Qualitative research contributes to an understanding of the human condition in different contexts and of a perceived situation. However, there is no perfect designed study, and unexpected events will always appear.

How to plan and perform a qualitative study using content

Content analysis is a widely used qualitative research technique. Rather than being a single method, current applications of content analysis show three distinct approaches: conventional, directed, or summative. All three approaches are used to interpret meaning from the content of text data and, hence, adhere to the naturalistic paradigm. The major differences among the approaches are coding ...

Content analysis is a research method for studying documents and communication artifacts, which might be texts of various formats, pictures, audio or video. Social scientists use content analysis to examine patterns in communication in a replicable and systematic manner. One of the key advantages of using content analysis to analyse social phenomena is its non-invasive nature, in contrast to ...
